

Update 5/23/16 from Rick Trujillo:

Hello Everyone--

This is my fourth email newsletter of the season for announcing the work schedule for the 2016 Hardrock trail work volunteers. This note is to let you know that I have received your emails in which you express interest in volunteering for trail work in 2016 on behalf of the Hardrock 100.

As many of you know, the Hardrock Volunteers Trail Work is traditionally done over two days, usually the weekend before the Hardrock run proper. This normally means having the two work days straddle the July 4th holiday weekend. This year, however, the Hardrock run itself has been moved back one week from the normal, scheduled to begin early morning Friday, July 15. This leaves the weekend of July 9 and 10 open for trail work, rather than the normal July 4th holiday weekend.

Therefore, the 2016 Hardrock Hundred trail work volunteers work schedule is for the two consecutive days of Saturday, July 9, and Sunday, July 10. This is a little less than two months away, hopefully enough time to allow for those who need to make work/travel/lodging-camping arrangements to attend the work parties. It is a little early to make firm work area commitments, except to say that work day 1 will be at Bear Creek Ouray and vicinity, and work day 2 will probably be at one or more locations in the Telluride area.

It is now late May and here in the western San Juan Mountains of Colorado Spring is well along in the valleys and beginning to creep up into the high country. As with the past several Winters, this one has been anything but normal, with erratic swings from one extreme to another. November was very stormy, with one storm dropping as much as two feet of snow right in the streets of Ouray, with nearly four feet total in town for the month. December and January continued to see snow storms, systematic with one or two per week, but with no more than a few inches at time, at least here in town. A big storm in early February dropped some 15 inches in Ouray. Then, unseasonable warm weather arrived and over the next eight weeks or so melted most of the snow in the valleys. Spring is anything but predictable, however, and a month long series of small storms began in mid April, finally ending only three days ago. The High country is still buried in snow but the valleys are turning green. The rivers and creeks are beginning to rise and should be in full flow in the next few weeks as the now warm temperatures melt the high country snow.

Saturday dawned clear and cool and I made a trip to Telluride for a variety of reasons, one being to take photos to show what this sector of the Hardrock course looks like at present. Seven photos are attached to this email.

I will be sending another general information email such as this at about this time in the coming month of June. Then as we get into July I will provide more detailed information such as where and when to meet for each work day. For those who have asked, please note that there is no "registration" for trail work until the mornings of the two specified work days. Those who show up on either or both mornings will then be registered as having done so.

Rick Trujillo

HRH Trail Work Volunteers Coordinator
